

#4)

## Asymptotes

$$y(x) = \frac{x^2 + 5x + 4}{(x-3)}$$

Graph the function.

Solution

---

Vertical Asymptotes

$$x = 3$$

⇒ slant Asymptote

Since the degree in the numerator is one more than the degree in the denominator, a slant asymptote exists.

Teacher ⇒ Mr. Joshua Davis

#4

## Asymptotes

$$\begin{array}{r|rr} x=3 & 1 & 5 \\ & & 3 \\ \hline & 1 & 8 \end{array} \quad \begin{array}{r|l} & 4 \\ & 24 \\ \hline & 28 \end{array}$$

$$y(x) = (x+8) + \frac{28}{x-3}$$

$$\text{As } x \rightarrow \pm \infty, \quad \frac{28}{x-3} \rightarrow 0$$

Our slant asymptote is

$$y(x) = x + 8$$

Teacher  $\Rightarrow$  Mr. Joshua Davis

(2)

# Asymptotes

#4

Y-intercept,  $x=0$

$$y(0) = \frac{-4}{3} ; (0, -1\frac{1}{3})$$

x-intercept,  $y=0$

$$\frac{x^2 + 5x + 4}{x - 3} = 0$$

$$x^2 + 5x + 4 = 0$$

Teacher  $\Rightarrow$  Mr. Joshua Davis

③

#### #4) Asymptotes

$$(x+1)(x+4)=0$$

$$x = -1 \quad \& \quad x = -4$$

$$(-1, 0) \quad \& \quad (-4, 0)$$

We found that  $x=3$  is a vertical asymptote.  
We must analyze the behavior of  $y(x)$   
for  $x$ -values very, very close to  $x=3$ .

Teacher  $\Rightarrow$  Mr. Joshua Davis

# Asymptotes

(#4)

$$\lim_{x \rightarrow 3^-} \frac{(x+1)(x+4)}{x-3} \Rightarrow \frac{(+)(+)}{(-)} \Rightarrow (-)$$

$$\lim_{x \rightarrow 3^-} y(x) \Rightarrow -\infty$$

Teacher  $\Rightarrow$  Mr. Joshua Davis

(5)

(#4)

## Asymptotes

$$\lim_{x \rightarrow 3^+} \frac{(x+1)(x+4)}{(x-3)} \Rightarrow \frac{(+)(+)}{(+)} \Rightarrow (+)$$

$$\lim_{x \rightarrow 3^+} y(x) \Rightarrow +\infty$$

Teacher  $\Rightarrow$  Mr. Joshua Davis (6)
